Star Diamond Tools Announces The Slurry Trap™

The Slurry Trap™ is a 20 gallon closed system that vacuums concrete / asphalt slurry, traps it in a **disposable filter bag**, and then pumps the filtered water back to the bit / blade for cooling.

This significantly increases sawing & drilling productivity by not having to source water or empty the vacuums when they become filled with slurry.

In some jurisdictions, asphalt and concrete slurry is considered a hazardous waste material and must be brought to a certified disposal site.

- The Slurry Trap™ separates the solids and the liquids for compliant disposal.
- The patented and tear-proof **DISPOSABLE FILTER BAG** traps over 100 lbs of solids.
- The water remaining can stay in the closed system or can be neutralized and then disposed of.
- The Slurry Trap™ enables the contractor to carry less water, save on labor, use less fuel, increase productivity, and significantly reduce disposal costs!
