

Concrete Grinding System

Grinding concrete dust is now considered a dangerous business.

Airborne silica dust is invisible to the naked eye and has been deemed a dangerous substance which has been proven to cause lung cancer. The only thing that will filter out this dangerous airborne dust is a Certified HEPA filter which removes particles down to .3 microns. Non-certified HEPA filters only go down to .5 microns...60% less efficient. For a HEPA filter to be certified, it must be individually tested, and signed off by a testing agency. Many vacuums claim to have HEPA filtration, but if there is no serial number or signature on the actual filter proving it has been tested and approved, it is NOT considered compliant. Non-compliance may result in job delays, fines, and exposes your workers to un-necessary health risks.

Be safe, and protect the health of everyone on the jobsite.

Certified HEPA Vac, Grinder, Shroud & Diamond Cup

Ermator S-25 – CERTIFIED HEPA Vacuum – Power Tool Outlet – AUTOMATIC filter shaking system

Milwaukee Angle Grinder – 6146-30

Sit-Up Corner Hood – Get into corners – Lifetime Guarantee

5" Star Diamond Swirly Cup - STA-14034

\$1495.00
